Nov 1999

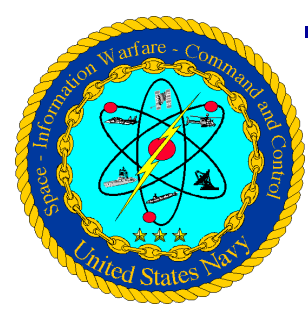

White Pages Re-cap

- **A database of locator information**
 - Very simply, all we want to do is find anyone in the Navy and Marine Corps
 - Easy to implement - anyone with IP connectivity and a Navy.mil or USMC.mil address can access it
 - Low to no maintenance, low cost, proven technology
- **An interim solution while the long-term solution is decided by SPAWAR's Horizontal Integration and N/MCI efforts**
 - WP is not a network architecture or a directory synchronization solution
 - WP is not an MS Exchange architecture nor a vehicle to develop one
- **The White Pages effort will eventually be absorbed by the HI and N/MCI efforts**

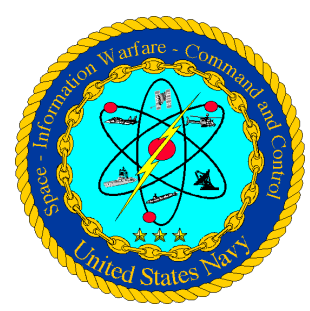

Ver 2.0 Requirements Meeting

- Including Afloat E-mail addresses is a TOP PRIORITY from Fleet attendees
- The **only** A plus item out of yesterday's requirements meeting

N6 Recommended Solution

- **Proceed with Interim Solution set**
 - **Afloat e-mail information can be included by March 2000**
 - **Minimizes impact on afloat operations**
 - **Minimal impact on schedules and minimum life-cycle investment**
- **Incorporate CPF recommendations for long term solution as part of Horizontal Integration and N/MCI efforts**
